All described tasks will be completed under the direct supervision of Eric Hearon, a Wyoming licensed Professional Land Surveyor and point of contact for this project. All final products will be reviewed and approved by Eric before being released inclusively to the client.

Task 1 | Map and Grid Generation

KLJ will provide all base map data through a combination of Global Position Systems (GPS) and UAV survey methods. Field work will include locating existing survey control when available, and/or establishing new control of permanent nature as needed and can be preserved. Established control will be used for subsequent surveys, as required by the RFP, to generate required reports and drawings as described in previous stated formats. Field crews will also provide temporary targets incorporated with required grids for aerial map pin control as necessary for each stage to capture required data to map MSW and C&D items. Field crews will also verify permitted boundary as deemed necessary, and boundaries of the MSW and C&D cells. Control for project and flight will be points of the requested grid plans whenever possible. All critical base map points will be field verified, such as flowlines of drainages, culverts, roads, buildings, fencing, wind turbines, and other relevant natural features or improvements within project boundaries. As noted in the RFP, the map generated from this survey will include mapping of the entire 260 acres of the site, and the Phase 1 area will be clearly defined on any grid plans and maps produced.

Task 2 | Air Space Utilization Calculations and Isopach Figures

TASK 2A

SWT will complete the volumetric analysis comparison for airspace (MSW and C&D) and soil usage at the City of Cheyenne Landfill between the proposed 2021 topography information (new base mapping/survey work completed with Task 1 by KLJ) and the second survey of the MSW and C&D areas. This analysis will be completed using Civil 3D AutoCAD software, which develops two digital terrain models and calculates the volume in cubic yards (CY) between the two topographic maps.

Upon completion of this volume calculation, the airspace consumed will be broken out to eliminate volumes associated with excavation and refuse fill due to refuse settlement (areas outside the MSW/C&D fill areas). These waste boundaries will be determined by KLJ under Task 1. The calculated airspace utilization factor (AUF) will not include soil stockpiles or other non-waste stockpiles created within the active landfill footprint between survey dates, SWT/KLJ will provide backup justifying any volumes not included in the AUF, if applicable. For example, justification may include survey of the area prior to stockpiling in order to calculate volume.

With this information and the tonnage information provided by the City, SWT will evaluate the density of the in-place refuse (AUF) for both MSW and C&D. Additionally, when preparing AUF calculations, SWT typically calculates the soil-to-refuse ratio to give the client a good understanding of soil (daily cover) to refuse ratio for their site and how it compares to published industry standards.

Task 2B

A letter report will be prepared, along with back-up calculations and requested drawings/maps, that will be submitted to the City for review. Drawings will include a north arrow, site grid, scale, and title block. Limits and volumes reported on the AUF calculations will be clearly indicated on the applicable support drawing(s). SWT will practice the same methods as described in Task 2A when preparing drawings and other requested items, i.e., calculations/depth comparisons for remaining capacity (new base map versus final top of waste contours). After concurrence from the City, SWT will finalize the report to the City and it will be stamped and signed by a Wyoming registered Professional Engineer.

Project Area

KLJ has reviewed the information in Exhibit A of the RFP, including the operations overview and background of the project, and understand that the landfill is broken into two phases with the focus of the RFP being on Phase 1 for the fill areas that will need to be clearly defined in any maps or grid plans produced.

We are also aware of the survey points that may be available for use in our site work and, if available, will work with the staff to identify the location of them as needed.

We understand that a Wyoming Licensed Land Surveyor is required to oversee the field tasks listed in Section 2 of the RFP and will generate the grid plans, as required, up to three, for the permitted area to be used on-site. In conjunction with this, KLJ understands that up to three site visits may be requested for each year of the contract.

Upon the second mapping survey of the site, SWT will coordinate with KLJ to produce the AUF report and Isopach as requested in task 2 of Section 2 of the RFP, and will submit for City approval prior to finalizing.
